

Complete Internet Management Software

WinGate is a highly capable internet management application.

Designed to either complement existing systems or work stand-alone WinGate provides significant business benefits.

Using any Windows machine as a gateway or proxy, WinGate monitors and controls connections to the internet, providing per-user policy control over local, remote and even Terminal Services users.

Improve staff productivity

- Clamp down on inappropriate internet use with advanced per-user policy & content control.

Improve internet performance

- Multiple caches improve internet efficiency leading to higher bandwidth availability.
- Bandwidth shaping allows control over how bandwidth is used.

Improve internet reliability

- Protect against link failure with support for multiple internet connections.

Reduce Network Management burden

- Provides automatic network configuration.
- Intercepting proxies eliminate client configuration.
- Seamless user authentication using your existing Active Directory
