

Escape Worldwide rely on Cloud Hosted MDAemon to save them time, increase reliability and provide predictable costs.

London-based Escape Worldwide provide carefully selected long haul holiday packages for their clients through up to date first-hand knowledge of destinations they feature.

“Access around the clock to our email is essential because our customers and suppliers are often located overseas” explained Darren Vurnum, Part Owner at Escape.

THE CHALLENGE

“The flexibility of having our own dedicated mail server is essential, but running it on a standalone PC was becoming increasingly time consuming to monitor and maintain.

Darren went on to explain, “In addition, as a small business, controlling costs is paramount so I also wanted to remove the sometimes unpredictable nature of new hardware and software expenses.”

THE SOLUTION

Escape now use a Cloud Hosted MDAemon Server, dedicated exclusively for their use and running on Amazon’s highly reliable and hugely scalable AWS hosting infrastructure.

Zen Software fully manage and monitor their server 24/7, and guarantee availability.

Escape have full, unrestricted access to the MDAemon application and service status monitoring via their mobile devices.

THE OUTCOME

Darren explains the positive impact this has had on his business:

“We have the flexibility we need from a dedicated email server but also the peace of mind it’s in the hands of the experts so we can’t mess it up!

“Our server still works just as if it was in our office and we now have the time to focus on what we do best. We highly recommend Cloud Hosted MDAemon to any business.”

Darren Vurnum, Part Owner at Escape Worldwide
