

Advantages of Email Archiving For Your Company

Efficient, long-term email management is key to a company's success. Only those who are able to use emails efficiently over many years as a communication tool, as well as one of the most valuable information resources of our time, can truly consider themselves ready for the future.

Legal Advantages

Regulatory Compliance & eDiscovery

MailStore Server helps companies meet a growing number of regulations on email compliance, eDiscovery, and other legislation. MailStore Server is also an important tool that helps these companies protect themselves against general legal risk or customer complaints.

Financial Advantages

Total Protection Against Data Loss

Emails can be lost due to technical errors, such as corrupt PST files, or deleted intentionally or accidentally by users. Users often delete all their mailboxes upon leaving a company. MailStore Server can eliminate such risks completely.

Fast Search for All Users Increases Productivity

Emails are an important and very extensive knowledge resource. MailStore Server enables all users to access their emails easily and extremely fast, increasing productivity within the company.

Reduce IT Costs

Overloaded servers, increasing storage costs, and complex backup and restore processes place an enormous strain on IT departments and their budgets. MailStore Server permanently reduces these costs. It also shields against financial risks stemming from data loss or legal conflicts.

Independence and Security

At many companies, emails are not stored on local email servers under the company's control but on the servers of online service providers. This means that you have to trust the backup tools used by this company, and be sure that this company will be around in the future. By archiving all externally-managed data, you can build on this trust through a simple and effective backup strategy.

Technical Advantages

Reduce the Workload of Mail Servers

Emails can be deleted from the mail server's mailboxes according to a rule-based process once they have been archived. This allows the workload of the server to be maintained at a consistently low level. Procedures such as transferring emails to PST files become redundant.

Control over PST Files

PST files are prone to errors, and they are difficult to manage. PST file archiving with MailStore Server allows you to solve this problem easily.

One-Click Restore for All Users

Users can restore emails from the archive with a single mouse-click. The administrator no longer has to go through the time-consuming process of recovering them from the backup.

Elimination of Mailbox Quotas

Email archiving eliminates the need to use mailbox quotas as a way to limit the use of a mail server's storage capacity. Users are no longer forced to go through the time-consuming process of constantly deleting 'less important' emails or storing them externally.

Simplify Mail Server Backup and Restore

By reducing the mail server's data load, it can be backed up much more easily, i.e., more quickly, and also restored more quickly in the event of a failure.

Lower Storage Requirements

MailStore Server was designed for the secure and efficient management of very large data volumes and reduces storage requirements by means of single-instance technology and compression.

Centralization of Distributed Emails

Emails are often distributed across various mail servers, the computers of different users, or external service providers. MailStore Server enables all emails in the company to be stored in a central location, from where they can be searched.

Uninterrupted Access to All Emails When Servers Fail

The critical issue when backing up mail servers is the time that it takes to recover the data when servers fail. During this downtime, which can often last hours or days, the company no longer has access to business-critical information. When a mail server is out of service or data is lost, every user at the company can access all emails via the email archive. This allows you to continue operating your business without any disruptions at all.

About MailStore Server®

With MailStore Server, businesses enjoy the many legal, technical, and financial advantages of modern, secure email archiving. MailStore Server combines powerful technology with low costs and intuitive operation. Over 10,000 companies of all sizes across all sectors currently rely on MailStore Server for email archiving.
